Abstract

The expansion of the internet has grown rapidly from just being academically oriented to an interactive and a major business enterprise platform. Most transactions are now performed online. The rise in demand for such services prompts to a demand in the development of web based applications. This document gives a report on the work done during project research. The project research entailed coming up with different applications that can be used by a web based store. The work done included outlining the fundamentals of shopping cart systems as well as importance of security and reliability in web based applications.
