Research Project submitted in partial fulfillment for the Bachelor of Science (Hons) Degree in Computer Science, August 2009

## **ABSTRACT**

The accelerated advancement of the information age has posed opportunities to develop information systems that reduce work overload, are available over a wider geographical spectrum and that offer reliability. This system was developed to combat the problem of limited expertise in the car insurance industry. The Car Insurance Product Generating Expert System is an informative expert system that generates an appropriate premium policy document for a client. It also facilitates reinsurance which helps insurance companies share risk from clients among themselves. The significant activities carried out since the inception phase of the project till the conclusion of the project are the subject of this document.
