# NATIONAL UNIVERSITY OF SCIENCE AND TECHNOLOGY 

FACULTY OF APPLIED SCIENCE

DEPARTMENT OF APPLIED CHEMISTRY

MECHANICAL ENGINEERING

SCH 2205

Second Semester Examination Paper

May 2015

This examination paper consists of 7 pages

Time Allowed: 3 hours
Total Marks: 100
Special Requirements: Calculator, Trigonometry tables (attached)
Examiner's Name: Mr Golden G Nyambuya

## INSTRUCTIONS TO CANDIDATES

Answer ANY FIVE questions. Each question carries 20 marks.
Make use of clear sketches where necessary.

MARK ALLOCATION

| QUESTION | MARKS |
| :--- | :--- |
| 1. | 20 |
| 2. | 20 |
| 3. | 20 |
| 4. | 20 |
| 5. | 20 |
| 6. | 20 |
| TOTAL POSSIBLE MARKS | 100 |

SCH 2205

1. (a) A displacement vector lying in the $x-y$ plane has magnitude 5 m and makes an angle of $60^{\circ}$ with the $x$-axis. Find its $x$ and $y$ components.
(b) A ship at sea receives radio signals from two radio transmitters A and B 125 m apart, one due south of the other. The direction finder shows that transmitter A is $30^{0}$ south of east, while transmitter B is due east.
(i) Draw a sketch showing the point locations of A, B and the ship
(ii) Determine the distance of the ship from each transmitter. [2+2 marks]
(c) Suppose that a ball is thrown vertically upward with an initial velocity of $25 \mathrm{~m} / \mathrm{s}$. Determine:
(i) How high it will go,
(ii) What velocity it will have as it moves down past its original point of projection,
(iii) Its position 6 sec after it was thrown upwards, and
(iv) The velocity with which it will be moving at this time.

$$
[2+2+2+2 \text { marks }]
$$

(d) The angular velocity of an airplane propeller is increased from 1800 rpm to 2200 rpm in 10 sec . Determine:
(i) Its angular acceleration (in $\mathrm{rad} / \mathrm{s}^{2}$ )
(ii) The angle traversed this period (in radians)
[3+3 marks]
2. Solve the following problems:
(a) A force of 800 N is applied to a mass of 160 kg . Determine:
(i) The acceleration produced.
(ii) If the body starts from rest, determine the distance the body travels if the force acts on it for 12 sec .
[2+2 marks]
(b) A weight of 80 kg rests on a smooth plane which is inclined at an angle of $37^{0}$ with the horizontal, as shown in the figure below. Calculate:
(i) The normal force on the body
(ii) The magnitude of the horizontal force which will keep the block from sliding down the plane.
[2+2 marks]

(iii)Assume the surface is not smooth, and the coefficient of static friction is 0.8 . What is the frictional force between the block and the plank? [2 marks]
(c) Referring to the figure below, suppose that the body is pulled along a level floor by a rope making an angle of $30^{\circ}$ with the floor.

The body moves a distance of 15 m . If the force F is 40 N , and the power of the pulling machine is 26 W , calculate:
(i) The work done
(ii) The time it will take for the body to move the distance
(iii)The acceleration of the body
(iv)The final velocity of the body
(v) The kinetic energy of the body at the 15 m mark $\quad[2+2+2+2+2$ marks $]$

3 (a) Define the following terms
(i) Torque
(ii) Impact
(iii)Elastic collision
[1+2+1 marks]
(b) A Mercedes-Benz car with a mass of 2000kg is traveling at 60 mph when it strikes a Volkswagen of mass 1000 kg initially at rest. After the collision the two cars stick together. What is their velocity after the collision?
[2 marks]
(c) A 0.02 kg bullet if fired from a gun with a velocity of $500 \mathrm{~m} / \mathrm{sec}$. If the gun weighs 5 kg , what is the recoil velocity of the gun?
[2 marks]
(d) Find the torque exerted by the wrench on the bolt in the diagram below;

[2 marks]
(e) A student with an arm of length 0.6 m holds a suitcase weighing 25 N in her hand. Calculate the torque exerted on her shoulder by the weight if she holds her arm:
(i) Stretched horizontally away from her body
(ii) Hanging it straight down
(iii) At an angle of $60^{\circ}$ below horizontal
[2+2+2 marks]
(f) A 16 ft seesaw is pivoted in the centre. At what distance from the centre would a 2001b person sit to balance a 150lb person on the opposite end? (Sketch and label all the important quantities in this calculation)
[2+2 marks]
4. (a) Define the following terms:
(i) Young's modulus
[2 marks]
(ii) Poison ratio
[2 marks]

## SCH 2205

(b) A 1 mm diameter manganese bronze test specimen was subjected to an axial tensile load, and the following data were obtained.

| Gauge length | 10 mm |
| :--- | :--- |
| Final gauge length | 12.25 mm |
| Load at proportional limit | 18.50 N |
| Elongation at proportional limit | 0.016 mm |
| Maximum load | 55.00 N |
| Load at rupture | 42.00 N |
| Diameter at rupture | 0.845 mm |

Calculate the following the following:
(i) Proportional limit. [2 marks]
(ii) Modulus of elasticity. [2 marks]
(iii) Ultimate strength.
[2 marks]
(iv) Percentage elongation.
(v) Percentage reduction in area.
[1 mark]
(vi) Indicated rupture strength.
[1 mark]
(vii) True rupture strength.
(c) A solid shaft 5 m long is stressed at 80 MPa when twisted through $4^{\circ}$, using $\mathrm{G}=83 \mathrm{MPa}$.
(i) Compute the shaft diameter.
(ii) What power can be transmitted by the shaft at 20 Hz ?
[2 marks]
[2 marks]
5. (a) State and explain the following:
(i) Bernoulli principle.
(ii) Archimedes' principle.
(iii) Continuity equation.
(b) Oil at $20^{\circ} \mathrm{C}\left(\rho=888 \mathrm{~kg} / \mathrm{m}^{3}\right.$ and $\left.\mu=0.800 \mathrm{~kg} / \mathrm{m} . \mathrm{s}\right)$ is flowing steadily through an inlet and outlet where pressures are measured to be 745 kPa and 97 kPa , respectively. Determine the flow rate of oil through the pipe assuming the pipe is:

| (i) | Horizontal | $[3$ marks $]$ |
| :--- | :--- | ---: |
| (ii) | Inclined at $50^{\circ}$ upwards. | $[3$ marks $]$ |
| (iii) | Inclined $15^{\circ}$ down wards. | $[3$ marks $]$ |
| (iv) | Verify that the flow through the pipe is laminar. | $[2$ marks $]$ |

6. (a) A compound belt and counter shaft drive is shown in the diagram below. The pulley diameters are: A 80 cm, B $35 \mathrm{~cm}, \mathrm{C} 62 \mathrm{~cm}$ and D 32 cm .

The power input to the pulley is 10 kW at a speed of $100 \mathrm{rev} / \mathrm{min}$. If the belt drive is $85 \%$ efficient calculate
(i) The output power $(\mathrm{kW})$ at D .
(ii) The speed of rotation of D.
(iii) The torque exerted at D.
(b) A crate of mass 20 kg is pulled up a rough incline with initial speed of $3.00 \mathrm{~m} / \mathrm{s}$. The pulling force is 200 N parallel to the incline which makes an angle $40^{\circ}$ with the horizontal. The coefficient of kinetic friction is 0.400 and the crate is pulled 10.00 m .
(i) How much work is done by gravitational force on the crate?
[2 marks]
(ii) Determine the increase in the internal energy due to friction.
(iii) How much work is done by the 200 N force on the crate?
[2 marks]
(iv) What is the speed of the crate after being pulled 10.00 m ?

## End of Examination!!!

Trigonometry Table
