# NATIONAL UNIVERSITY OF SCIENCE AND TECHNOLOGY DEPARTMENT OF CIVIL AND WATER ENGINEERING FACULTY OF INDUSTRIAL TECHNOLOGY BACHELOR OF ENGINEERING (HONOURS) DEGREE PART V FIRST SEMESTER EXAM.- APRIL 2009 <br> WATER QUALITY MANAGEMENT: TCW 5201 

## INSTRUCTIONS

Answer any four questions.
Time: 3 hours
Total Marks: 100

## QUESTION 1

(a) Define the following terms of disease transmission related to water and give at least two examples of diseases that fall under each category: (i) water borne, (ii) water washed, (iii) water based and (iv) water related insect vector. (13 marks)
(b) A discrete spherical particle has a diameter of $0,15 \mathrm{~mm}$ and a relative density of 1.2 . Calculate the settling velocity in water at $20^{\circ} \mathrm{C}$. (Kinetic viscosity of water at $20^{\circ} \mathrm{C}$ is $1.01 \times 10^{-6} \mathrm{~m}^{2} / \mathrm{s}$ ). ( 12 marks )

## OUESTION 2

(a) Describe any five factors that influence the bactericidal efficiency of chlorine in water. (11marks).
(b) A Stream with a flow of $0.75 \mathrm{~m}^{3} / \mathrm{sec}$ and BOD $3.3 \mathrm{mg} / \mathrm{L}$ is saturated with DO (9.17 $\mathrm{mg} / \mathrm{L}$ at $20^{\circ}$ ). It receives an effluent discharge of $0.25 \mathrm{~m}^{3} / \mathrm{sec}$, BOD $20 \mathrm{mg} / \mathrm{L}$ and DO 5.0 $\mathrm{mg} / \mathrm{L}$. Determine the DO deficit at a point 35 km down stream if the average velocity of flow is $0,2 \mathrm{~m} / \mathrm{sec}$. Assume temperature is $20^{\circ} \mathrm{C}$ throughout, $\mathrm{K}_{1}$ for effluent / water mixture is 0.10 / day, $\mathrm{K}_{2}$ for stream is $0.40 /$ day. (14 marks)

## QUESTION 3

(a) Compare slow sand filters with rapid sand filters. (12marks)
(b) A filter bed is made of 0.45 mm size angular sand $(\theta=0.73)$ and has an overall depth of 800 mm and a porosity of 40 percent. Use Corman-Kozeny formular to estimate the head loss of the clean bed at a filtration rate of $120 \mathrm{~m}^{3} / \mathrm{m}^{2}$ day. Kinetic viscosity of water $=1.01 \times 10^{-6} \mathrm{~m}^{2} / \mathrm{s}$. (13marks)

## QUESTION 4

(a) Describe the purpose of carrying out a jar Test in water treatment and explain the procedures involved in doing it. (10 marks)
(b) A filter sand bed of depth 0.8 m and porosity 0.44 is backwashed at $1.5 \times 10^{3} \mathrm{~m}^{2} / \mathrm{m}^{2}$ (kinematic viscosity of water $=1.2 \times 10^{-6} \mathrm{~m}^{2} / \mathrm{s}$ ). If the sand grains are of 0.8 mm diameter and density of $2650 \mathrm{~kg} / \mathrm{m}^{3}$, calculate the height of the expanded bed, and its porosity after it is fluidifed . (15 marks)

## QUESTION 5

(a) Describe the compounds that are formed when chlorine is added to:
(i) Water free from organic matter and ammonia. (5marks)
(ii) Water in which ammonia is present. (5marks)
(iii) Which of the compounds formed in the chemical reactions above are most effective or powerful bactericides. (5 marks)
(b) Calculate the contact time (in minutes) required to reduce the number of E-coli bacteria by $99.4 \%$ from a wastewater in which residual chlorides level is $2 \mathrm{mg} / \mathrm{l}$.
(10marks)

## USEFUL FORMULAE

$$
\log 10\left(\frac{\left.N_{t}\right)}{N}=K t^{2}\right.
$$

$$
\mathrm{h}=1.07 \underline{\mathrm{l}_{\mathrm{cd}}} \frac{\mathrm{~V}^{2}}{4}
$$

$$
\phi \mathrm{gdf}
$$

Particles shape factor, $\phi$ for spherical sand $=\mathrm{n} 1.0$, worn sand $=$ and angular sand $=0.73$

$$
\frac{\mathrm{h}}{1}=\frac{(1-\mathrm{f})}{\mathrm{f}^{3}} \underset{\mathrm{~g} d \phi}{\mathrm{~V}_{\mathrm{s}}^{2}} \quad \mathrm{E}=150
$$

$$
\begin{aligned}
& \mathrm{V} s=\mathrm{g}\left(\rho_{\underline{\mathrm{g}}}-\rho \omega d^{2} p\right. \\
& 18 \mu \\
& \mathrm{Vs}=\sqrt{\frac{4 g d\left(\rho_{\mathrm{D}}-\rho \mathrm{w}\right)}{3 \mathrm{C}_{\mathrm{d}}}} \\
& \mathrm{C}_{d}=\frac{18.5}{\operatorname{Re}^{0.6}} \\
& \mathrm{C}=\frac{24}{\operatorname{Re}}+\frac{3}{\sqrt{\operatorname{Re}}}+0.34 \\
& \mathrm{RE}=\frac{\phi V \mathrm{~s} \rho \mathrm{~d}_{2}}{\mu} \\
& V_{s}=\sqrt{\frac{4 g d}{3 C_{d}}}\left(\rho_{p}-\rho_{w}\right) \\
& t_{c}=\frac{1}{K_{2}-K_{1}} \log \underset{K_{1}}{\underline{\mathrm{~K}}_{2}}\left[\begin{array}{l}
1-\underline{\mathrm{D}}_{\mathrm{o}}\left(\mathrm{k}_{2}-\underline{\mathrm{k}}_{1}\right) \\
L_{o}^{K_{1}}
\end{array}\right] \\
& \mathrm{D}_{\mathrm{c}}=\underset{\mathrm{K}_{2}}{\mathrm{~K}_{1}} \mathrm{~L}_{10}-\mathrm{K}_{1}-\mathrm{K}_{1} \mathrm{t}_{\mathrm{c}} \\
& \mathrm{D}_{\mathrm{t}}=\frac{\mathrm{K}_{1}}{\mathrm{~K}_{2}-\mathrm{K}_{1}} \mathrm{~L}_{\mathrm{o}}\left(10-{ }^{\mathrm{K} 1 \mathrm{t}}-10-{ }^{\mathrm{K} 2 \mathrm{t}}\right)+\mathrm{D}_{\mathrm{o} 10}{ }^{-\mathrm{k}} 2 \mathrm{t}
\end{aligned}
$$
