

NATIONAL UNIVERSITY OF SCIENCE AND TECHNOLOGY

FACULTY OF SCIENCE AND TECHNOLOGY EDUCATION

DEPARTMENT OF SCIENCE, MATHEMATICS AND TECHNOLOGY EDUCATION

GENERAL CHEMISTRY (PST1142)

Main Examination Paper

NOVEMBER 2024

This Examination Paper consists of 4 pages

Time Allowed: 3 hours

Total Marks: 100

Special Requirements: Periodic Table and graph paper.

Internal Examiner: Irene Mpofu

External Examiner: Dr S.J. Mpofu

**INSTRUCTIONS**

1. Section A: Answer two (2) questions.
2. Section B: Answer any three (3) questions.
3. Each question carries 20 marks
4. Use of calculators is permissible

Mark Allocation

QUESTION	MARKS
1	20
2	20
3	20
4	20
5	20
6	20

PST1142

**SECTION A: Answer two questions. [40]**

**Question 1**

a) State what you understand by the terms: i) relative atomic mass. (ii) mass number. (iii) mole. [6]

b) Copy and complete the table

Particle	Relative Mass	Relative charge
Electron		
Neutron		
Proton		

[6]

c) The element Bromine with a relative atomic mass of 79.90 has two isotopes  $^{79}\text{Br}$  and  $^{81}\text{Br}$ .

(i) Compare and contrast the two isotopes. [6]

(ii) State and explain which of the two isotopes  $^{79}\text{Br}$  and  $^{81}\text{Br}$  is more common in the element. [2]

**Question 2**

a) Show by means of a diagram the bonding within a molecule formed when ammonia reacts with Boron trifluoride,  $\text{BF}_3$  in a 1:1 ratio to give a white crystalline solid. (3)

b) Predict the type of bond formed and the formula of the compound between (i) X and Y. (ii) X and Z. (iii) Y and Z. (iv) X and X.

Given that X, Y and Z represent elements of atomic numbers 8, 17 and 56 respectively. [8]

c) The electronegativities of carbon, oxygen and sulphur are 2.5, 3.5 and 2.5 respectively.

Draw the Lewis structures of carbon dioxide, carbon disulphide and sulphur dioxide. Comment on the likely polarity of the molecules. [9]

**SECTION B: Answer any three questions. [60]**

**Question 3**

a) Write the electron configuration of bromine. [2]

b) The table shows sets of quantum numbers for four electrons.

Electrons	Quantum numbers			
	n	l	m <sub>l</sub>	m <sub>s</sub>
I	0	0	0	1/2
II	1	1	0	1/2
III	2	1	-1	-1/2
IV	3	3	3	1/2

State with reason if each set of quantum numbers is possible or not possible. Where possible name the orbital. (10)

b) Caproic acid contains carbon, hydrogen and oxygen. When 0.450g of the acid is burned 0.418g of water and 1.023g of carbon dioxide are formed.

Calculate the percentage of carbon, hydrogen and oxygen in caproic acid. [8]

#### Question 4

a) Copper exists as two isotopes, copper-63 and copper-65 with percentage abundances of 69.1% and 30.9% respectively.

(i) Calculate the relative atomic mass of copper. [3]

(ii) Use the relative atomic mass obtained in (i) to calculate the mass in grams of a single atom of copper. [3]

b) Phosphine (PH<sub>3</sub>) burns in oxygen to produce phosphorus pentoxide (P<sub>2</sub>O<sub>5</sub>) and water.

(i) Write a balanced equation for the burning of phosphine in oxygen. [2]

(ii) Calculate the mass of phosphorus pentoxide that will be produced when 17.0g of phosphine are reacted with 16.0g of oxygen gas. [8]

(iii) Calculate the percentage yield if 12.6g of phosphorus pentoxide is obtained when 17.0g of phosphine reacts with 16.0g of oxygen gas. [4]

#### Question 5

a) Copy and complete the table. The central atom is underlined.

Species	Number of electron pairs around central atom	Hybridisation	Molecular Geometry
<u>N</u> F <sub>3</sub>			
<u>S</u> O <sub>3</sub>			
<u>I</u> Cl <sub>3</sub>			
<u>B</u> H <sub>3</sub>			

[12]

b) Predict the bond angles in  $\text{NH}_4^+$ ;  $\text{NH}_3$ ;  $\text{NH}_2^-$ . Explain your reasoning. [8]

### Question 6

a) Explain the following observations as fully as you can.

(i) The compound  $\text{XeF}_4$  is known but  $\text{NeF}_4$  is not known. [4]

(ii) The boiling point of  $\text{H}_2\text{Te}$  ( $-2.2\text{ }^\circ\text{C}$ ) is greater than that of  $\text{H}_2\text{S}$  ( $-60.7\text{ }^\circ\text{C}$ ) but less than that of  $\text{H}_2\text{O}$ . [4]

(iii) The first ionisation energy of magnesium ( $738\text{ kJ mol}^{-1}$ ), is higher than that of sodium ( $495\text{ kJ mol}^{-1}$ ). [4]

b) The table shows the composition of two oxides of lead.

Oxide	Percentage	
	Lead	Oxygen
Yellow powder	92.80	7.20
Bright red powder	90.55	9.45

(i) Determine the formulae of the yellow powder and the bright red powder. [5]

(ii) Write a balanced equation for the reaction of the yellow powder with oxygen to produce the bright red powder. [3]
